

# clerkroom

**Barristers Chambers leverages expertise to create market leading application on a highly available, fully resilient platform.**

## Background

**Clerksroom is an amazing, rapidly expanding Somerset-based Organisation, which has 150 exclusive Barristers that provide advice and representation at all Civil Courts and Tribunals in England and Wales.**

As a successful, fast-growing, and technology-led business, Clerksroom need suppliers that are experienced, flexible, quick to react, and who always provide industry-leading expertise and advice.

In January 2019, Clerksroom365 was released - a bespoke, market-leading application specifically developed to replace off-the-shelf products which either restricted business growth, or caused high and unnecessary cost of deployment. The new application was a huge success, and quickly became **business-critical** to all users across the Organisation.

Since its release, the Eloquent Team have been constantly reviewing both the application

and the underlying platform, with the aim of using their expertise and experience to add further value and remove any potential single points of failure. Together, the Development and Infrastructure Teams at Morphsites and Eloquent Technologies have designed a new, multi-cloud, high availability platform; with full **server resilience** and **geographical diversity** – so even if we lost a complete data centre site, the impact on users would be minimal.

Eloquent is proud to say that, as of February 2020, this solution is now live, and implementation of the new platform was completed with zero downtime or impact to the users.
