**South-west based
Housing Provider turns
to Eloquent Technologies
for a robust and secure IT
infrastructure solution.**

Background

Based in Yeovil, Somerset, Yarlington is a community benefit society and a leading provider of affordable housing in the south-west, with over 10,000 properties across Somerset, Devon and Dorset.

Yarlington Housing Group went through an IT restructure, calling in several external IT consultants to look closely at their infrastructure and make suggestions based on their changing requirements. Yarlington wanted to make the most of their technology, whilst **minimising any risk** of downtime. They were keen to deploy a DataCentre-based solution whilst continuing management of their server platform in-house to retain some control and flexibility.

The IT team understood the applications used and the windows server environment, but Eloquent provided the knowledge required for Datacentre

and MPLS networks to help pull together the overall solution. Managed co-location in a server 'rack' environment with guaranteed power, security and Tier 1 network connectivity, a **resilient network connectivity solution** linking 45 sites into the core Datacentre are all wrapped up with ongoing **IT Consultancy Services and support.**

Eloquent are responsible for the day-to-day running of the environment and keep Yarlington's servers in a highly secure and resilient Datacentre. This allows Yarlington's internal IT staff to focus on other business operations in-house. Help is however, always at hand.
